

# PHOTONIX JAPAN: VISITECH SHOWCASES LEADING TRUE 4K UV TECHNOLOGY WITH PARTNER MARUBUN

*Posted on November 13, 2025*

Visitech, together with its dedicated Japanese partner Marubun Corporation, demonstrates its true 4K UV exposure subsystem platform at Photonix Japan 2025 this week – Asia's leading exhibition for laser and photonics technology.

The event is a crucial hub for innovation in advanced semiconductor manufacturing and precision

optics. Marubun together with Visitech had the opportunity to highlight the 4k platform's proven reliability and readiness for high-volume manufacturing in the Asia-Pacific region.

With the industrial support of Marubun, the subsystem is provided to customers seeking for a reliable, high-resolution UV imaging platform that can keep up with the demanding industrial applications where precision and throughput are critical.

## Reliability and capability highlights

- **Industry-proven performance:** Demonstrated high yield and stability during continuous operation for several years of deployment worldwide.
- **True 4K resolution:** State-of-the-art native 4K, supporting next-generation product roadmaps.
- **High throughput:** Stable and precise UV imaging platform based on Visitech's native 4K technology.

The LRS-MCx 4K subsystem is designed for high-throughput UV imaging systems. It delivers consistent optical performance, scalable configuration options via scrolling, and robust operation, making it well-suited for demanding production environments.

*"This established system provides the reliability required for today's most rigorous manufacturing demands, ensuring our customers can achieve their yield and throughput targets from day one."*

"Working closely with our trusted partner, Marubun, ensures that our customers in Japan receive the world-class precision of our 4K platform together with immediate, high-quality local sales and technical support," said Kazu Ohara, Managing Director of Visitech's Tokyo branch.

**Visitech and Marubun welcome all attendees to experience a live demonstration of the LRS MCx 4K subsystem at Marubun's booth, Hall 8, 49-1, at Makuhari Messe in Chiba/Tokyo. The expo dates are Nov 12-14, 2025.**
