PRODUCTRONICA 2023: DISCOVER THE WORLD’S MOST ADVANCED MASKLESS LITHOGRAPHY SUBSYSTEM

Posted on November 10, 2023

As we unveil our latest innovations within next-generation Fineline «photoheads» (light engines), we aim to reinforce our subsystems' solid role in high-end applications such as Advanced Packaging, UHDI, and HDI.

Market opportunities

We look forward to discussing the market opportunities you will discover in entering the sub-30-µm world with us and creating the world’s most refined machines and tools for PCB, FOWLP, FOPLP, FPCB – or your unique application.

Meet us in the PCB hall

By catering to our longstanding tradition of meeting up with close partners and customers, our booth is in the PCB hall. But don't let our location fool you – the innovations we exhibit are truly in the Fineline and next-generation digital light processing (DLP®) field.

See you in Munich, November 14-17!
