

STRONG MOMENTUM AT TCT JAPAN 2026

Posted on February 4, 2026

Visitech Japan attended TCT Japan 2026 at Tokyo Big Sight, together with [Marubun](#), welcoming visitors to a shared booth throughout the three-day event.

The event welcomed 45,202 visitors (including those from other exhibitions at Tokyo Big Sight). Visitech met with all existing customers during the show, and the booth generated many new business leads and discussions with potential partners.

Industrial momentum

TCT Japan remains an important meeting place for the Japanese additive manufacturing

community, and this year's turnout reflected a market that is moving steadily from technology evaluation to industrial adoption. Conversations increasingly focus on real manufacturing requirements: stable processes, repeatable quality, and [scalable production](#).

Japan is a demanding market, and that's a good thing. The expectations for stability and quality are high, which drives very focused, technical discussions.

— Kazu Ohara, Managing Director, Visitech Japan

Postive feedback

Visitech would like to thank Marubun for the strong collaboration throughout the event.

The booth received positive feedback from visitors, with the Scandinavian-inspired atmosphere standing out and being well-received by the Japanese audience.

Next, Visitech and Marubun will follow up on the discussions from the exhibition.
