

WE WELCOME YOU TO TCT JAPAN!

Posted on January 19, 2023

Experience the latest [world's-first 8K technology](#), and don't miss the chance to see our groundbreaking [Direct Image Sintering \(DIS\) system](#) for high-volume polymer powder bed fusion and the [LRS-MCx 4K](#) – the first-ever native 4K resolution industrial UV projector, with unprecedented UV power. Let our team show you how Visitech's high-volume additive manufacturing technologies can benefit your new machine build and how our scrolling DLP® stereolithography subsystems and high-powered [infrared projectors](#) can add resolution, volume and speed to your industrial 3D print machines and bioprinters. Visitech Japan looks forward to seeing you at TCT Japan in Tokyo, booth 3D-06, Feb 1-3!

Any build size at maximum quality

Say hi to precision, speed, and cost-efficiency! Our solutions enable machine builds capable of printing the most delicate 2-micron parts (about the size of a bacterium) – and our scrolling subsystems allow ultra-large build areas of 1 x 5 m at high speed and resolution.

20 years of expertise

Take advantage of our extensive experience. Let's discuss how you can leverage 20 years of industrial lithography and additive manufacturing expertise for your next machine design, using our state-of-the-art subsystems to help your new machines achieve more.

Meet our team at booth 3D-06 – book a meeting or demo now!

Busy show schedule? You can conveniently book a meeting with us in advance below.

TCT Japan opening hours: February 1 – 3, 10 AM – 5 PM
